SIZE GUIDE

FINDING THE RIGHT SIZE

To ensure your complete satisfaction, we recommend that you check your measurements against our sizing chart to determine the right size for you. Make sure to measure directly on the body and then find your size in our size guide.

All measurements are in centimeters.

Feel free to contact our Customer Service at customerservice@nimbusnordic.com if you have additional questions about our sizes.

HOW TO MEASURE

NIMBUS ACADEMY

WHAT IS NIMBUS ACADEMY?

Nimbus Academy is an education platform primarily targeted our sales force, external partners and our key customers. The goal is to expand the overall knowledge about the most interesting topics in our industry.

A well-trained sales force

COTTON KNOWLEDGE

HIGH QUALITY COTTON

We choose our cotton and its processing carefully to make sure we offer high quality cotton.

LONG STAPLE COTTON

There are two broad groups of cotton; long staple cotton and shorter staple cotton. Long staple cotton yields extra-ordinary long fibres and is known for weaving strong, soft and durable high-quality fabrics due to its superior strength and uniformity.

The use of high quality long staple cotton in all our products is one of the reasons our cotton products stand out from the crowd.

COMBED COTTON

Combed cotton is made by treating the cotton fibers before they are spun into yarn. The harvested cotton is applied on to fine brushes (the 'combs') to clean away impurities and any short fibers. Roughly 15% of the volume is removed this way, and leaves only long, straight fibers.

The slivers of combed cotton are then spun into thread. As a general rule, combed cotton is more expensive than conventional carded cotton.

RING-SPUN COTTON

The yarn that is created for ring-spun cotton, is spun in a way that produces stronger and longer threads, as it is continuously twisted and thinned to make an extra-fine string of fibers.

During this process, the threads are compacted in a way that produces a very strong and durable material. The more times the fiber has been spun and twisted, the softer it feels. Open end yarn that is not ring-spun often result in a fabric with a rough texture.

BENTON

INSULATION KNOWLEDGE

THERMAL INSULATION

Protection against cold is dependent upon thermal resistance or thermal insulation of the garment. Sorona® fibers provide high thermal insulation while retaining optimal warmth with less filling and weight, creating a more comfortable garment.

SORONA® FIBER

At Nimbus we use top of the line materials in our products, and with Sorona® Aura we offer light-weight, breathable and warmth features with sustainability in mind.

Sorona® Aura fiber is an eco-efficient performance fiber. It is partially plant-based and can be recycled in any normal polyester recycling stream.

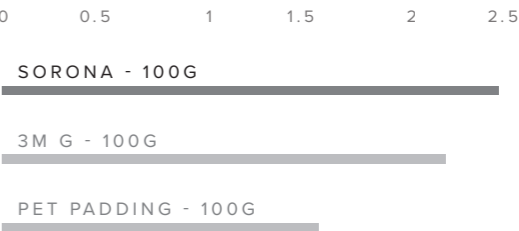

The main benefits for the consumer are seen over the life of the garments, as Sorona® based fabrics maintain a high level of stretch, recovery & colour fastness wash after wash.

PATENTED TECHNOLOGY

Sorona® is produced with PDO, a building block with endlessly versatile potential, and using a biological process. 37% of the polymer is made using annually renewable plantbased ingredients. The revolutionary Bio-PDO compound turns a formerly chemical process into an eco-efficient biological one.

INSULATION VALUE OF YOUR CLOTHING

50 % higher CLO value = Higher warmth than non branded insulation

SUSTAINABILITY

SUSTAINABILITY IS A KEY PRIORITY AT NIMBUS

At Nimbus Nordic A/S we continuously take new steps to strengthen our practices and become even better at what we do.

One of our absolute key priorities is to design and create products with sustainability in mind.

We aim at minimizing the impact on the environment and protecting the well-being of future generations.

In order to live up to our CSR & Sustainability strategy, we are very selective about who we cooperate with. By using audits and assessment tools to select and monitor factories and by favouring fewer partners over many, we build long-lasting and close partnerships with our suppliers.

We strive to implement a sustainable and ethical approach throughout our complete supply chain, for example, all our products are covered by REACH*, 93% of our styles are produced on Amfori* audited factories, and many of our products have obtained product certifications, which are explained further on the following pages.

**REACH is a European Regulation concerning chemicals and their safe usage.*

**Amfori is the leading global business association for open and sustainable trade.*

PRODUCT CERTIFICATIONS & STANDARDS

As a validation of our sustainability efforts, many of our products have obtained product certifications, and below we explain the different certifications and recognized logos. The list even includes some symbols we have designed ourselves to signal how a product has been made with sustainability in mind.

OEKO-TEX® STANDARD 100

STANDARD 100 by OEKO-TEX® is one of the world's best-known labels for textiles tested for harmful substances. It stands for customer confidence and high product safety. Clothing manufactured under the principles of OEKO-TEX® meets requirements for pH value and content of harmful substances, such as pesticides and heavy metals.

CERTIFIED ORGANIC COTTON

Organic cotton is cotton grown without the use of synthetic pesticides, artificial fertilizers, and other toxic chemicals. By law, organic cotton plants cannot come from genetically engineered seeds, and strict regulations dictate how cotton must be grown to be certified organic.

CHANGING TO

We are currently working to improve our organic labelling, so our products comply with an even better, stricter, and more comprehensive standard called OCS.

OCS

The Organic Content Standard (OCS) is an international, voluntary standard that provides chain of custody verification for materials originating on a farm certified to recognized national organic standards. The standard is used to verify organically grown raw materials from the farm to the final product.

OCS 100

Applies to products made from at least 95% organic cotton mixed with conventional cotton or synthetics materials. The cotton used must be certified 100% organic.

OCS BLENDED

Applies to products made with a minimum of 5% organic cotton mixed with conventional cotton or synthetics materials.

HEIQ® FRESH

HeiQ® Fresh is a family of silver-free odor control textile technologies with ingredients that are either bio-based or mineral-based. HeiQ® Fresh products tackle the problem of smells on textiles effectively by absorbing VOC (Volatile Organic Compound or the “smelly molecules”). HeiQ® Fresh is Bluesign submitted; a certification that applies to chemicals, processes, materials and products, certifying it is safe for the environment, workers and consumers.

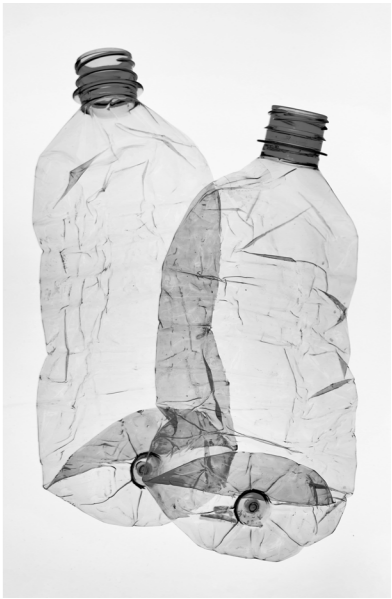

BIONIC FINISH® ECO

BIONIC-FINISH® ECO represents an ecological technology and unique nonhaloge-nated, APEO-free, fluorine-free formulations for permanent water repellent finishing. This ecological water-repellent impregnation offers a variety of consumer friendly features such as rejecting water and aqueous soiling substances, being washable and suitable for all fiber types. It has the advan-tage of not having any negative effect on breathability, no fluorinated compounds and being formaldehyde free.

RECYCLED FABRIC

Recycled fabric uses mainly plastic bottles, packaging, fishing nets or textile waste as its raw material.

QUALITY CONTROL

MEETING INTERNATIONAL STANDARDS

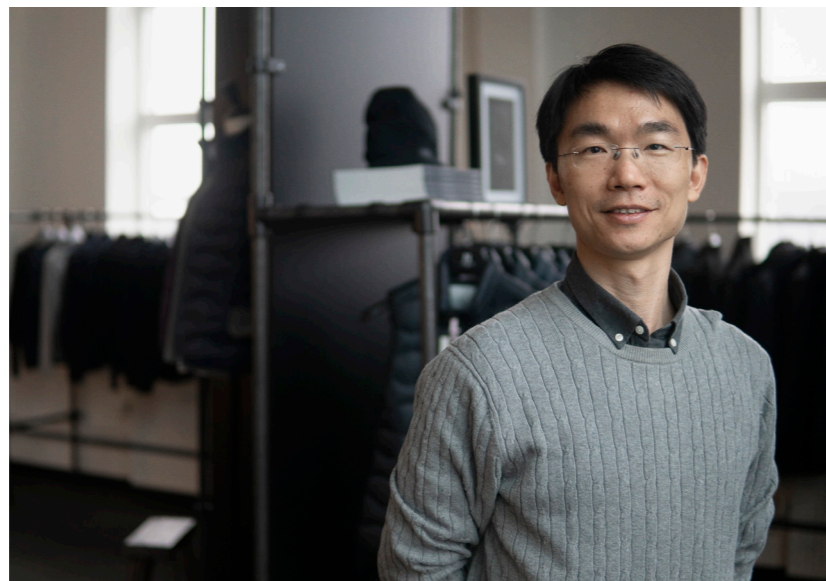

We make sure to meet international standards by working with trusted partners, which function as global benchmark for quality and integrity.

Quality is essential for our brand and by simultaneously encouraging classic designs over innovative designs and simplifying future collections, we extend the life of our range and attempt to follow the philosophy of Slow Fashion.

As quality has our highest priority, all our productions are inspected locally by our own team or by third party agencies before shipped from production sites.

In China, we have our own facilities housing our loyal and valued col-leagues, who constantly monitor the product quality and factory performances.

Products that are made with a performance fabric/ membrane, adding features like Water Resistance or Breathability, are tested to make sure they meet the demands. Such styles are tested by third party laboratories according to international standards.

TOBBY / CHINA OFFICE MANAGER

QIMA

QIMA represents a global leading quality control and compliance service provider, who se-cures, manages and optimizes the quality and compliance of our products and suppliers.

All auditors and inspectors of QIMA are managed by quality control and auditing specialists to ensure compliance with international standards.

INTERTEK

Intertek delivers Total Quality Assurance solutions for textile products. Their compre-hensive services enable us to ensure quality and safety with precision.

At Nimbus we mainly use Intertek solutions for fabric and chemical testing.

SGS

SGS is the world's leading inspection, verifi-cation, testing and certification company.

At Nimbus we use the services from SGS for both fabric-testing and third party inspections on productions.

CODE OF CONDUCT

Our Code of Conduct lays out our principles, standards, and the moral and ethical expectations that our employees and third parties are held to as they interact with our organization.

Our Code of Conduct is a set of rules, principles, values, employee expectations, behaviours and relationships that we consider important and that summarize our commitment to sustainability.

We strive to make a positive difference to our social, environmental and economic responsibilities.

10 TO FOLLOW

- | | |
|---|--|
| 1 Nimbus will support and respect the protection of internationally proclaimed human rights. | 6 Nimbus will abolish discrimination in relation to work and employment conditions. |
| 2 Nimbus will make sure that they are not complicit in human rights abuses. | 7 Nimbus will support a precautionary approach to environmental challenges. |
| 3 Nimbus will uphold the freedom of association and the effective recognition of the right to collective bargaining. | 8 Nimbus will support initiatives to promote greater environmental responsibility. |
| 4 Nimbus supports the elimination of all forms of forced and compulsory labour. | 9 Nimbus will encourage the development and diffusion of environmentally friendly technologies. |
| 5 Nimbus will support the effective abolition of child labour. | 10 Nimbus will work against corruption in all its forms, including extortion and bribery. |
