Snickers®
WORKWEAR

We have a job to do

This year, we're doing the same thing we've done every year since 1975. We're making the one tool that every craftsman and craftswoman need — durable and functional workwear. No matter if you're an apprentice, a journeyman, or a master, our clothes and accessories make it a little bit easier for you to get the job done. And get it done right.

That's because we're constantly inventing — and reinventing — workwear. We find smart and clever solutions to everyday problems, and then put them to good use. In durable trousers that are the go-to-choice for both men and women. In high-visibility garments that make being seen a priority, and staying safe easy. In summertime gear that's specifically designed for ventilation and UV protection in hot, humid, and sunny conditions. In base layers that help regulate your core temperature, midlayers that keep you properly insulated, and in outerwear that keeps you warm and dry. No matter the weather. No matter the job.

And we do all of that with a long-lasting durability that makes for a hard-working sustainability.

That's what we do at Snickers Workwear.

And it's what we call

#InventingWorkwear

Trousers that work as hard as you.

Our trousers are made to help you get the job done, no matter what that job is. Designed and built with purpose — all of our trousers deliver the durability and functionality you need to crawl, climb, and carry your way through whatever the job throws at you.

6771 AllroundWork, Women's Full-Stretch Trousers Detachable Holster Pockets

6771 AllroundWork, Women's Full-Stretch Trousers Detachable Holster Pockets

You're a professional. Good at what you do, and even better at getting it done. But to do it right, you need the right tools. Like these 4-way stretch trousers. They not only have the hard-working durability and clever functionality you've come to expect, but the enhanced comfort, optimal size, and slim fit you absolutely need. That's the kind of tool you can count on.

Ergonomic fit on your knees

Our new 9122 Ergonomic Kneepads provide technically advanced knee protection and a pre-curved, flexible design for a perfect fit and long-lasting comfort. Certified according to EN 14404 Type 2, Level 1.

Make yourself seen.

When worksite visibility decreases, the risk for workplace accidents increase. That's why you need hard-working, high-visibility workwear. Our fluorescent colours make you easier to see at dawn, dusk, and during the day, while our reflective materials make it easier to see you in dim and dark conditions.

6943 High-Vis Class 2, Stretch Work Trousers
Holster Pockets

6943 High-Vis Class 2, Stretch Work Trousers Holster Pockets

On some jobs, there's no difference between being safe and being seen. That's when you need a pair of fluorescent and reflective high-visibility trousers. Class 2 no less — according to EN 20471 certification.

Long-lasting visibility, hard-working sustainability

The latest additions to our durable High-Vis collection are made in part with bio-based Sorona® fabrics. 37% of the fibres in this performance fabric are made using renewable plant-based materials. Besides a reduction of our ecological footprint, Sorona® fabrics provide an increased colourfastness, long-lasting elasticity, and optimal comfort.

Finding what to wear.

We invent and develop workwear. That means our garments are loaded with the latest technical features and functions, not to mention fabrics and materials. That also means that it's not always easy to know which jacket or pair of trousers you should get.

That's why we've organised our workwear into colour-coded families – to help you find the right garment that does the job you need it to do.

AllroundWork

Ready for work, any day of the week.

With an emphasis on durability, comfort and functionality, this collection is an excellent and safe choice for everyday use.

FlexiWork

A comfortable fit in any working position.

Designed for jobs that demand lots of physical flexibility while still delivering extreme durability with the best possible fit.

LiteWork

Durable comfort in hot and humid environments.

When temperatures soar, you need moisture-wicking, quick-drying, ventilated UV-protection to stay dry, cool, and safe.

RuffWork

Made to last in the toughest of conditions.

For these kinds of jobs, durable, hard-wearing fabrics and construction aren't just what you want, they're what you need.

High-Vis

Make yourself seen for a safer workplace.

If you do your job in poor lighting or busy environments, then you want to make sure that you stand out in the crowd.

ProtecWork

Multi-norm, protective wear for high-risk jobs.

When your gear can be the difference between life and death, it has to follow all the right regulations and standards.

Durability means sustainability.

Hard-working, long-lasting products are the cornerstone of our sustainability efforts, as well as our entire business. It's common sense — the longer our workwear lasts, the less impact we have on the environment. Now that may mean we sell fewer products in the short term, but we believe it will make our business stronger in the long run. That's because we think that the more sustainable our products are, the more people will want them. And that's better for us, our communities, and our planet.

Now no matter how well-constructed our workwear is, we can't make anything more durable than its weakest component. That's why we invest heavily in innovation, development, and testing — so that we never have to compromise on quality, or sustainability. But even if much of our sustainability boils down to durability, we still have our work cut out for us. So we've divided our focus into three interconnected arenas that cover our entire value chain.

Production

How we behave as a company, setting standards for our suppliers to ensure that our clothing is made responsibly.

Design

How we choose materials and design our clothes for long-lasting durability and hard-working functionality.

Collaboration

How we team up with our partners and customers, working together to promote sustainable business practices and circular behavior.

Kneepads

0405

9191 XTR D3O® Craftsmen Kneepads

Advanced knee protection for work that involves extended periods of frequent kneeling. D3O® material retains the shape for long durations while offering extra impact protection. A lightweight design and supportive ventilation provide flexibility and comfort.

Craftsmen kneepads that feature advanced knee protection for extended periods of frequent kneeling. An EN 14404 Type 2 Level 1 rating guards against pebbles, nails and various debris during work that requires mobility. The pads are made of the innovative D3O® material that offers enhanced impact protection and retains its shape for long durations. In addition, a curved and highly durable construction ensures the kneepads stay securely in place for continuous comfort, while the interior conforms to the knee and distributes pressure when kneeling.

- EN 14404 Type 2 Level 1 knee protection
- D3O® material for impact protection
- Retains shape for extended periods of frequent kneeling
- Ergonomic design for stability and flexibility
- Durable and long-lasting design

Material: 100% polyolefin and 100% D3O®.

Size: One-size

1400

9112 D3O® Lite Craftsmen Kneepads

Kneepads offering advanced knee protection during work that involves frequent kneeling. Designed to reduce strain during everyday use, the D3O® LITE material provides impact protection, ventilation and a lightweight construction.

High-tech kneepads featuring advanced knee protection with enhanced impact protection. Boasting an EN 14404 Type 2 Level 1 rating, the pads have been specifically designed for frequent kneeling in mobile work environments, guarding against pebbles and various debris on the floor. D3O® LITE material offers impact protection and shock absorption, while a curved, lightweight construction paired with a ventilating design ensures the kneepads are comfortable and easy to wear. In addition, a soft interior conforms to the knee, keeping the kneepads in place and distributing the pressure evenly while kneeling.

- EN 14404 Type 2 Level 1 knee protection
- D3O® LITE material for enhanced impact protection
- Ergonomic design for ventilation and stability
- Curved, lightweight design
- Durable and long-lasting design

Material: 100% polyolefin polymer blend.

9110 Craftsmen Kneepads

Kneepads offering advanced knee protection during work that involves frequent kneeling. Designed to reduce strain, the lightweight, flexible and durable kneepads provide everyday working comfort.

Lightweight kneepads featuring advanced knee protection and a comfortable fit. With an EN 14404 Type 2 Level 1 rating, the pads have been specifically designed for frequent kneeling in mobile work environments, guarding against pebbles and various debris on the floor. EVA material allows for a lightweight and flexible construction to ensure the kneepads are comfortable and easy to wear. In addition, a soft interior conforms to the knee, keeping the kneepads in place and distributing the pressure evenly while kneeling.

- EN 14404 Type 2 Level 1 knee protection
- EVA construction
- Lightweight and flexible design
- Compatible with the KneeGuard™ system

Material: 50% EVA, 50% polyethylene.

Size: One-size

0408

9118 Floorlayer Kneepads

Kneepads offering advanced knee protection during work that involves extended periods of kneeling. Polyethylene comfort beads ensure the pads keep their shape over time, while a lightweight and breathable design provides comfort and stability.

Floorlayer kneepads that provide advanced knee protection during extended periods of kneeling. The pads' EN 14404 Type 2 Level 1 rating ensures you stay protected during extended hours on your knees and while engaged in work that requires mobility. Polyethylene comfort beads provide a breathable and lightweight construction and retain their shape over extended periods of time for optimal protection. In addition, ergonomic design combined with a soft interior make sure the kneepads stay in place and that the pressure is distributed evenly.

- EN 14404 Type 2 Level 1 knee protection
- Polyethylene comfort beads retain shape for extended periods
- Lightweight and breathable design

Material: Shell: 85% polyamide, 15% polyester. Filling: Expanded polypropylene beads.

Size: One-size

9122 Ergonomic Kneepads

Ergonomic kneepads offering advanced knee protection during work that involves frequent kneeling. A curved, lightweight and flexible design reduces strain and ensures everyday working comfort.

Lightweight kneepads with ergonomic shape offering advanced knee protection. With an EN 14404 Type 2 Level 1 certification, the kneepads are built for frequent kneeling in dynamic work environments, protecting against various debris on the floor. EVA material provides flexibility while a pre-curved design ensures the pads stay in place for continuous comfort. In addition, the pads provide great force distribution and penetration protection while they comfortably conform to the knees.

- EN 14404 Type 2 Level 1 knee protection
- Lightweight and flexible EVA material
- Ergonomic design for a tight and secure fit optimized for slim-fit trousers
- Compatible with the KneeGuard™ system

Material: 50% EVA, 50% polyethylene.

Size: One size

0500

9169 D3O® Ergo Craftsmen Kneepads

Ergonomically shaped kneepads offering advanced knee protection for work that involves frequent kneeling. Designed for everyday use, the pads are made of durable D3O® material that provides enhanced impact protection.

Technically advanced kneepads with an ergonomic design ensuring that the pads are always in the right position for optimal knee protection. Made of durable and flexible D3O® material, the pads offer enhanced impact protection. The kneepads come with an EN 14404 Type 2 Level 1 rating to guard against pebbles, nails and various floor debris. In addition, the knee pads are machine-washable, which means you don't have to remove the pads when washing your work trousers. Designed to fit Snickers Workwear KneeGuard™ system.

- D3O® material for enhanced impact protection
- EN 14404 Type 2, Level 1 knee protection
- Retains shape for extended periods of frequent kneeling
- Ergonomic design for a tight and secure fit that matches perfectly with our Slim Fit trousers
- Compatible with the KneeGuard™ system
- Machine-washable

0400

3400

8019 AllroundWork, Midlayer Wool Full Zip Jacket

Warm and cozy wool blend jacket with a sporty outlook, reflective details and great warming features. The full zip is made of a soft, stretchy wool blend, clean surface and a sporty outlook with reflective details. This is as much a midlayer as a jacket, depending on the weather conditions.

Midlayer made of a wool blend quality with laser cut placket and reflective details. Jacket has a standing collar and 2 zip pockets at front. Reflective print on sleeve and placket gives an updated look. Wool has antibacterial qualities and is also water repellent which inhibits bacterial growth and thus bad odor. This midlayer in wool do not need to be washed frequently but can be weathered in damp weather with good results. Wool can absorb moisture and feel dry and heats even in humid conditions. You can also regulate the climate by opening or closing the zipper at front. The midlayer offers a smooth feeling and is a great choice for everyday use.

- Wool stretch mix for extra movement
- 2 zip pockets and elastic sleeve cuffs
- Soft flatlock seams
- Reflective print details on arm and placket
- Elastic drawcord in waist

Material: 78% Wool, 19% Viscose, 3% Elastane

Size: XS-XXXL

2427 AllroundWork, Wool Long Sleeve T-Shirt

Long-sleeve t-shirt made of 100% soft merino wool that offers great durability and natural body temperature management. The t-shirt has a casual design and works both as a base layer and outer layer on warmer days.

Smooth and comfortable long-sleeve t-shirt made of 100% mulesing-free merino wool, which is a natural fiber with the performance characteristics of a high-tech fiber. The garment offers a warm, soft feeling and absorbs moisture from the body without feeling wet. Since wool is self-cleaning, the long-sleeve t-shirt can be carried for several days without washing. A great choice for everyday use.

- 100% mulesing-free merino wool
- Soft and durable material
- Soft flatlock seams
- Printed neck label
- Naturally anti-bacterial

Material: 100% mulesing-free merino wool with kalender finish, 160 g/m².

2527 AllroundWork, Wool T-Shirt

Soft and smooth t-shirt made of 100% merino wool that offers great durability and natural body temperature management. The t-shirt has a casual design and works both as a base layer and outer layer on warmer days.

T-shirt made of 100% mulesing-free merino wool. Wool is a natural fiber and has antibacterial qualities due to the keratin. The fiber is also water repellent which inhibits bacterial growth and thus bad odor. Wool garments do not need to be washed frequently but can be weathered in damp weather with good results. Wool can absorb moisture and feel dry and heats even when it's humid. The garment offers a warm, smooth feeling and is a great choice for everyday use.

- 100% mulesing-free merino wool with calender finish
- Soft and durable material
- Soft flatlock seams
- Printed neck label
- Naturally anti-bacterial

Material: 100% mulesing-free merino wool with kalander finish, 160 g/m².

9912 Wash-In Textile Waterproofing

Launched in collaboration with OrganoTex®, this is an easy-to-use, biodegradable, and PFC-free treatment for re-proofing water-repellent surfaces.

An effective treatment for restoring water-repellent properties to washed and worn garments without effecting their colour, texture, or breathability. Easily applied in short washing machine cycle, best results are achieved on synthetic materials such as polyester and polyamide. The treatment is not to be used on flame-retardant protective wear or other garments certified to PPE Regulation (EU) 2016/425 category III.

- Biodegradable in accordance with OECD 301A
- Free from fluorocarbons (PFAS, PFOS, PFOA), cyclic siloxanes, and isocyanates
- Winner of the 2018 Scandinavian Outdoor Sustainability Award
- 500 ml bottle sufficient for 5-7 garments treatments
- Safety data sheet available upon request

Stay visible. Stay safe.

High-visibility clothing in low-visibility workplaces.

High-visibility clothing is a vital part of personal protection when working in dim light conditions. Our new wider range of high-vis garments offers a diverse choice of functionality and comfort for those working in these conditions.

We've restyled our most popular trousers and jackets to create high-visibility versions, and have added the features that we know customers want, such as an integrated ID badge holder and heat-sealed reflective tape instead of sewn-on reflective strips. This technology makes the material more supple, thus allowing greater ease of movement. We know that experienced and devoted wearers of our work trousers will appreciate the Kneeguard system, preshaped legs and amazingly comfortable fit that they're used to, and they can rest assured that they'll be visible and safe while working. For the summer months, when high visibility clothing can be a burden to wear, we offer styles with a new, airier structure that lets perspiration escape more easily.

How does it work – The difference between fluorescent, reflective and contrast material.

The purpose of the **fluorescent** (usually yellow, orange and red neon colours) is to be visible in dusk, dawn and daylight as well as in fog or haze.

To be certified according to EN ISO 20471:2013, the **contrast** materials must be resistant to bleeding during washing so that they don't ruin the visibility of the garment's fluorescent and reflective materials.

The **reflective** material, on the other hand, is designed to be visible while illuminated in dark conditions.

6943 High-Vis Class 2, Stretch
Work Trousers Holster Pockets

Orange or yellow?

It's usually easier to spot a person wearing yellow fluorescent garments compared to orange. This is because yellow has higher luminous power than orange, meaning it appears brighter to the eye from a specific angle.

In a white winter landscape, however, the opposite applies. This is because orange provides a higher contrast to a white background. So, although orange has lower luminance than a yellow fluorescent material, the orange colours are more visible in a winter landscape because of higher contrast. In this case, contrast trumps luminance.

ProtecWork

A collection built on years of experience protecting professionals.

ProtecWork is a collection of protective wear that combines expert know-how of heat and flame protection with Snickers Workwear's renowned ergonomics and fit. In order to offer the best heat and flame-retardant garments, Snickers Workwear has acquired a leading brand on the Swedish market that boasts over 30 years' experience designing and developing protective wear for the energy and railway sectors. The result is a cutting-edge collection that offers inherent heat and flame protection, excellent durability, great comfort and an ergonomic, modern fit.

Developed in close partnership with professionals.

Our protective wear is the result of a long and successful partnership with professionals working in the energy and railway sectors. They're the ones working in high-risk environments, and the only ones who truly know how protective wear is used and functions in the real world. This close partnership has resulted in several innovative features, such as symmetrical leg pockets and DuPont™ Kevlar® reinforced pockets.

100% inherent protective wear.

Our mission is to provide clothing that protects against burns. All our fabrics are therefore inherent, meaning that the flame protection is built into the fibre. Our main inherent fibre is modacrylic, which combines high flame retardancy with low density. This means that

the protective garments can be built with relatively lightweight materials, offering comfort and freedom of movement for the wearer. In addition, modacrylic also provides good protection against electric arc.

Ergonomics is also a very important aspect when we develop our protective wear. Garments that provide great fit and optimal mobility tend to be used more often, contributing to increased protection, greater comfort, and enhanced efficiency.

Layer up to increase your protection.

One of the best ways to improve your level of protection is to wear layers (all layers/garments must of course be certified and flame retardant). The main benefit of wearing layers is that the air gap formed between different garments pro-

vides increased protection. There is no general rating for how much increased protection the air gap between layers provides, although we have conducted a number of tests that show that the air gap increases protection by more than 5 cal/cm².

Standards and requirements dictate our design.

Our product development always starts with the item's intended use and the task at hand. What are the risks in the work environment? What do the standards require? And what does the wearer need in order to perform optimally? Working based on these facts and requirements, and by conducting thorough tests through-out the entire process, we can develop functional, comfortable and above all safe Personal Protective Equipment.

Find out more.

Please visit our webpage to download the ProtecWork catalogue to learn more about how our protective wear can protect you from serious risks such as heat, flames, electric arcs and hazardous chemicals.

Wear layers to increase your protection.

One of the best ways to improve your level of protection is to wear layers. A fundamental requirement is of course that all garments are certified and flame retardant. The main benefit of wearing layers is that the air gap formed between different garments provides increased protection.

There is no general rating for how much increased protection the air gap between layers provides. However, we have conducted a number of tests that show that the air gap increases protection by more than 5 cal/cm². The calorie level of the extra protection depends on a variety of factors, such as fabric structure, thickness and construction — and for a precise value, combined tests on each layer must be performed. What we know for certain, though, is that wearing multiple layers improves the protection rating. It's therefore best to think of the air gap between each layer as extra protection that improves your chances of avoiding burns in the event of an accident.

Outer layer — jackets

6695

1163 ProtecWork, Insulated Hood Jacket, High-Vis Class 3

Water-resistant insulated high-vis work jacket that enhances safety in high-risk environments. High arc rating and great insulation ensure personal protection in hazardous and cold conditions.

Insulated hood jacket designed for personal protection in high-risk environments. The work jacket has a high arc rating and antistatic properties to protect against heat, flame and electric arc. In addition, the jacket features an insulated construction that offers certified protection against cold according to EN 342 (when worn together with work trousers 6663). Pre-bent sleeves with dropped ends ensure comfort and mobility while Class 3 high visibility provides enhanced safety in low-light conditions. The jacket also comes with a shorter front to provide easy access to tools and items in the work trouser pockets.

- Inherent heat and flame protection
- Electric arc protection
- Certified protection against cold according to EN 342 (worn with 6663)
- Wind-protective collar
- High visibility Class 3
- Helmet-compatible hood

1560 ProtecWork, Jacket, High-Vis Class 1

Personal protective jacket built to provide protection and comfort in high-risk work areas. The jacket offers certified protection against several hazards and features pockets that offer practical storage and extra functionality.

Protective jacket that provides working comfort, high visibility and protection in high-risk work areas or hazardous environments. The jacket offers certified protection against electric arc and welding. Additional safety is provided by inherent heat and flame protection and antistatic properties. Pre-bent sleeves with dropped ends and a dropped back provide added comfort during work. In addition, flame-retardant lining at front, shoulders and sleeves provides enhanced protection for commonly exposed body parts. For sleeves and front, the ATPV value is 27.6 cal/cm², class 1 and HAF 89.9%. The jacket also comes with a shorter front to provide easy access to tools and items in the work trouser pockets.

- Certified protection for welding
- Certified protection against electric arc
- Napoleon pocket for tablet
- ID-card holder inside pocket for extra functionality
- High collar for extra neck protection

1668 ProtecWork, GORE-TEX Jacket, High-Vis Class 3

Waterproof, lightweight GORE-TEX work jacket with extremely high arc rating that provides protection and high visibility in high-risk environments and low-light conditions. Pre-bent sleeves ensure mobility and comfort.

Protective work jacket made of waterproof and durable 2-layer GORE-TEX fabric that keeps you dry and warm in wet and cold conditions. The jacket features inherent flame-resistant properties and offers certified protection against heat, flame and antistatic as well as very high electric arc protection. In addition, heat-sealed reflective tape around the body, sleeves and on the shoulders provides Class 3 visibility for extra safety. Comes with wind-protective high collar, several pockets and plenty of space for profiling.

- 2-layer waterproof GORE-TEX fabric with inherent flame-retardant technology (GORE® PYRAD®)
- Smooth lining for minimal friction against mid-layer garments
- Heat-sealed reflective tape around the body, sleeves and on the shoulders (Class 3)
- Pre-bent sleeves with adjustment at sleeve ends
- Dropped sleeve ends with knitted cuffs offer extra protection without hampering your performance while dropped back ensures protection in all working positions

6695

1860 ProtecWork, Insulated Parka, High-Vis Class 3

Protective parka designed to provide reliable insulation, working comfort and optimal performance in high-risk work areas or hazardous environments. The parka offers visibility of the highest class as well as certified protection against numerous hazards.

Work parka insulated with a smooth lining that offers certified protection against cold according to EN 342 (when worn together with work trousers 6663). Built to provide reliable protection, the parka also offers certified protection against electric arc, heat and flame. In addition, the parka provides high visibility Class 3 and antistatic properties. A protective collar, adjustable helmet-compatible hood and pre-bent sleeves with dropped sleeve ends provide extra protection. Adjustable waist and bottom hem and cuffs with thumb grip offer additional flexibility and comfort. The front pockets come with traditional flap closure for access from above but feature also an opening in the side for smooth hand warming.

- High visibility Class 3
- Certified extra high protection against electric arc (35+ cal/cm² and Arc Protection Class 2)
- Inherent heat and flame protection
- Spacious chest pocket for practical storage
- ID-card pocket for extra functionality
- Back pocket with zipper for storage of beanie, gloves, etc.

6568 ProtecWork, GORE-TEX Trousers, Holster Pockets, High-Vis Class 2

Waterproof and lightweight GORE-TEX shell trousers with high arc rating that provide protection and high visibility in high-risk environments and low-light conditions. Pre-bent legs ensure mobility and comfort.

Protective shell trousers made of waterproof and durable GORE-TEX fabric that keep you dry and comfortable in really wet conditions. The trousers protect against heat and flame, antistatic and high electric arc and come with heat-sealed reflective tape around the legs for Class 2 visibility. In addition, the KneeGuard™ system keeps the kneepads in the right position for optimal protection. Combine with flame-retardant underwear or base layer to increase the arc rating and improve your heat and thermal hazard protection.

- Compatible with 9757 holster pockets
- 2-layer waterproof GORE-TEX fabric with inherent flame-retardant technology (GORE® PYRAD®)
- High arc rating for protection against electric arc
- Left leg pocket with pen pocket, removable ID-pocket and knife holder
- Pre-bent legs for excellent freedom of movement and KneeGuard™ system knee pockets
- Heat-sealed reflective tape around the legs for increased visibility (Class 2)

1361 ProtecWork, Waterproof Shell Jacket, High-Vis Class 3

Waterproof shell jacket providing reliable protection and comfort in hazardous environments and high-risk work areas. The jacket features certified protection against electric arc and merges working comfort with protection.

Waterproof work jacket built to offer high visibility and personal protection in high-risk work areas. The jacket offers certified protection against electric arc, inherent heat and flame protection and antistatic properties. Waterproof fabric and taped seams ensure protection in wet and windy conditions, while pre-bent sleeves with dropped sleeve ends and a dropped back offer additional comfort and protection. For full weather protection, the jacket should be worn together with trousers 6563.

- Extra high protection against electric arc
- Waterproof jacket according to EN 343
- Certified for welding and allied processes and for protection against lighter chemicals
- Flap-protected side pockets for practical storage
- Chest pocket with ID-card holder inside
- Lined, adjustable and helmet-compatible hood

1668 ProtecWork, GORE-TEX Jacket, High-Vis Class 3

Waterproof, lightweight GORE-TEX work jacket with extremely high arc rating that provides protection and high visibility in high-risk environments and low-light conditions. Pre-bent sleeves ensure mobility and comfort.

Protective work jacket made of waterproof and durable 2-layer GORE-TEX fabric that keeps you dry and warm in wet and cold conditions. The jacket features inherent flame-resistant properties and offers certified protection against heat, flame and antistatic as well as very high electric arc protection. In addition, heat-sealed reflective tape around the body, sleeves and on the shoulders provides Class 3 visibility for extra safety. Comes with wind-protective high collar, several pockets and plenty of space for profiling.

- 2-layer waterproof GORE-TEX fabric with inherent flame-retardant technology (GORE® PYRAD®)
- Smooth lining for minimal friction against mid-layer garments
- Heat-sealed reflective tape around the body, sleeves and on the shoulders (Class 3)
- Pre-bent sleeves with adjustment at sleeve ends
- Dropped sleeve ends with knitted cuffs offer extra protection without hampering your performance while dropped back ensures protection in all working positions

6695

6563 ProtecWork, Waterproof Shell Trousers, High-Vis Class 2

Waterproof shell trousers ideal for use in hazardous environments or high-risk work areas. The personal protective trousers offer reliable protection and combine working comfort with flexibility.

Wind- and waterproof shell trousers that offer reliable protection in hazardous and high-risk work environments. The personal protective trousers offer certified protection for welding and feature antistatic properties, inherent heat and flame protection and exceptionally high protection against electric arc. In addition, the trousers offer protection against lighter chemicals, featuring covered, protected pockets. A heat-seal reflective provides high visibility according to EN ISO 20471 Class 2 for extra safety in dim light conditions. KneeGuard™ system ensures reliable knee protection.

- Exceptionally high protection against electric arc, APC 2 and calorie levels at 30 cal/cm²
- Certified protection for welding
- Pre-bent legs and gusset cut in crotch for outstanding movement
- KneeGuard™ system certified according to EN 14404
- DuPont™ Kevlar® reinforced pockets

6568 ProtecWork, GORE-TEX Trousers, Holster Pockets, High-Vis Class 2

Waterproof and lightweight GORE-TEX shell trousers with high arc rating that provide protection and high visibility in high-risk environments and low-light conditions. Pre-bent legs ensure mobility and comfort.

Protective shell trousers made of waterproof and durable GORE-TEX fabric that keep you dry and comfortable in really wet conditions. The trousers protect against heat and flame, antistatic and high electric arc and come with heat-sealed reflective tape around the legs for Class 2 visibility. In addition, the KneeGuard™ system keeps the kneepads in the right position for optimal protection. Combine with flame-retardant underwear or base layer to increase the arc rating and improve your heat and thermal hazard protection.

- Compatible with 9757 holster pockets
- 2-layer waterproof GORE-TEX fabric with inherent flame-retardant technology (GORE® PYRAD®)
- High arc rating for protection against electric arc
- Left leg pocket with pen pocket, removable ID-pocket and knife holder
- Pre-bent legs for excellent freedom of movement and KneeGuard™ system knee pockets
- Heat-sealed reflective tape around the legs for increased visibility (Class 2)

8261 ProtecWork, Rain Jacket PU, High-Vis Class 3

Protective PU rain jacket that provides protection against heat, flame, wind and rain. Class 3 visibility offers extra safety in low-light conditions.

High-vis protective PU rain jacket that keeps you dry, visible and protected in wet and low light conditions and hazardous environments. For optimal performance, the jacket comes with extra ventilation in the upper back and openings for easy access to inner-layer pockets. Heat and flame protection with antistatic properties guard against hazards in high-risk areas. In addition, the highest visibility rating, Class 3, provides added security in low-light conditions. Longer fit and helmet-compatible hood enhance protection even more.

- Heat and flame protection
- Wind and water protection
- Button drainage hem to divert water from body
- Helmet-compatible hood
- High visibility Class 3
- Ventilation at upper back

EN ISO 20471:2013 Class 3

5500

9070 ProtecWork, Hood, High-Vis Orange

Flame-retardant, tight-fitting hood that offers certified protection for work in hazardous environments and high-risk work areas.

Protective high-visibility hood built for work in hazardous environments and high-risk work areas. The hood is made of a strong comfortable multinorm fabric and offers inherent protection against heat and flame in hazardous, rough working conditions. In addition, the hood comes with a tight fit and covered neck to avoid sparks in the neck area and to fit smoothly underneath a helmet. To be attached to work jacket 1562 and coverall 6062.

- Inherent protection against heat and flame
- Antistatic properties
- Soft and comfortable fabric
- Elastic drawstring for adjustable fit
- Quick and easy attachment with flame-retardant snap buttons
- Prepared to fit together with work jacket 1562 and coverall 6062

EN ISO 14116:2015 Index 3

EN 1149-5:2018

Material: 31% polyester, 28% modacrylic, 20% Aramid Kermel®, 20% CV FR, 1% antistatic, 320 g/m².

1563 ProtecWork, Wool Terry Jacket

Terry knitted wool jacket designed to offer reliable protection in cold conditions and high-risk work areas. The personal protective jacket safeguards against several hazards and provides working comfort.

Wool jacket that provides personal protection in hazardous environments. The jacket offers certified protection against electric arc and comes with inherent heat and flame protection and antistatic properties. A dropped back hem provides added comfort and a protective collar guards against tough elements. In addition, cuffs with thumb grips ensure extra warmth in cold environments. The terry knitted wool jacket can be used as a mid-layer for extra insulation and warmth in cold conditions as well as to increase arc protection.

- Terry knitted wool blend
- Certified protection against electric arc
- Inherent heat and flame protection
- Can be worn as a mid-layer for extra insulation and protection
- Cuffs with thumb grips and dropped back

EN ISO 11612:2015 A1, A2, B1, C2

4360 ProtecWork, Wool Terry Vest

Comfortable mid-layer vest made of wool with inherent flame-retardant properties combined with antistatic carbon fibers for great antistatic characteristics. Short-sleeve items cannot be certified for electric arc; for work in such environments we recommend wearing a long sleeve flame-retardant baselayer or t-shirt underneath, such as 2460 or 9461, to increase the Arc Rating and improve your heat and thermal hazard protection. However, this material can withstand calories of up to E_{BT50} 9,1 cal/cm².

- Protects against heat and flame
- Wool with inherent flame-retardant properties
- Antistatic carbon fibers
- High collar for extra protection
- Drop back for extra protection

EN ISO 14116:2015 Index 3

9463 ProtecWork, Boxer

When working in high-risk environments it's important to wear flame-retardant garments all the way from the inside, next to skin. These comfortable boxer briefs are made of a soft fabric that makes a great alternative for those who prefer not to have wool closest to the skin. The boxer briefs provide basic protection against heat and flame and is the ideal first layer in a high-protection outfit. Short-sleeve or short leg items cannot be certified for electric arc; for work in such environments, we recommend the long-leg 9460 version.

- Soft and comfortable fabric
- Great stretch for a tight, perfect fit
- Protects against heat and flame, antistatic
- Combine with ProtecWork mid- and outer-layer garments to build protection in layers
- Antistatic properties

EN ISO 14116:2015 Index 3

Suit up for work

When the weather takes a turn for the worse, you need to layer to stay warm and dry.

If you're freezing cold, it's pretty safe to say you're not working as efficiently as you could. And wearing layers is the best way to regulate your body temperature when you're working in unpredictable or inhospitable conditions. That's why we work with a 3-layer system that helps to keep you warm and comfortable by transporting moisture away from your skin, insulating your body, and holding the elements at bay.

Base

No matter if it's hot or cold outside, the common denominator to successful layering is the ability to stay dry, even when you're working up a sweat. And your best tool to combat that is the layer that's closest to your skin — the base layer.

Base layer

Your first layer is key to staying dry and ventilated and should wick moisture away from your skin. All of our base layers offer seamless comfort and great fit, but with different degrees of ventilation and warmth depending on how active you are at work, and the weather you're working in.

During the colder months of the year, merino wool is a natural and durable base layer choice. Besides its ability to absorb around 5% of its own weight in moisture, wool has the extra-added benefit of being naturally odour resistant.

Mid

If your job involves regularly moving back and forth between indoor and outdoor sites, or you find yourself constantly switching back and forth between physical and stationary tasks, then you'll want to pay special attention to your second choice — the midlayer.

Midlayer

Your midlayer is for warmth and insulation. Properly designed and sized, it should trap your body heat in a pocket of warm air around you. That means your midlayer needs to fit well, without being too tight or snug. Ideally, it will be crafted of knitted, quilted, fleece, or microfleece materials that provide an airy yet comfortable enclosure.

However, in those situations that call for extra physical exertion, you'll still want the ability to ventilate. This calls for the functionality of zippers or more technical fabrics that provide greater breathability in specific areas such as your armpits.

Outer

Finally, hard work gets even harder if you have to work all day outside in cold, wet, or windy weather. That's when you'll definitely want to protect yourself from the elements with a weatherproof outer layer.

Outer layer

Your third layer needs to provide both wind and water protection, as well as keep you warm. And just as with both base layers and midlayers, you don't want to get too warm — so breathability and ventilation are key.

This means that our durable design has to intersect with our technical functionality. Our outer layers are built to be weatherproof enough to keep the elements at bay, and durable enough to withstand the wear and tear of a hard day's work. And then still deliver the level of breathability and ventilation you expect and demand.

Innovative work trousers for specific needs.

For many hard-working craftsmen and craftswomen, dependable trousers are one of their most important tools. But we all know that different jobs demand different tools. That's why we've created different collections depending on the job you do — AllroundWork, FlexiWork, LiteWork, RuffWork, High-Vis, and ProtecWork. Each is purposefully designed to be the right garment for the conditions and tasks at hand.

AllroundWork

Ready for work, any day of the week.

You only have one pair of knees. Make sure they last a lifetime.

Hard-working craftsmen and craftswomen put more pressure on their knees than many top-athletes. The risk of knee injuries is therefore far higher among trade professionals than other occupations. By changing kneepads frequently, injuries and chronic pain can be avoided. A general rule is to use at least two pairs of kneepads for each pair of trousers.

Snickers Workwears kneepads protect wearers against short- and long-term injuries, whether they occasionally work on their knees indoors or often kneel for prolonged periods of time. According to a survey*, only 1 in 3 Swedish trade professionals always wear kneepads. 60 per cent of respondents say they get aches and pains, mainly in their knees and back.

*Kantar Sifo, 2017

Find the right kneepad for you.

To be comfortable and effectively protected during your workday, it is crucial to wear the right type of protection for your specific work. The newly developed user guide on all kneepad packaging helps you make the right choice for maximum protection and comfort. It is also crucial that the kneepads firmly fit your trousers for reliable protection.

The Snickers Workwear knee protection systems KneeGuard™ and SquareFit™ will make it clear which kneepad goes with which trousers.

Reliable Knee Protection Systems.

KneeGuard™

The Snickers Workwear KneeGuard™ system is flexible in that it allows you to adjust the kneepads at two different heights to ensure correct positioning for maximum protection and comfort.

Square Fit™

The Snickers Workwear SquareFit™ system is easy to use and has larger pockets suitable for our Floorlayer kneepads, offering advanced knee protection during extended periods of kneeling.

KneeGuard™ – How does it work?

The kneepad is fitted from the outside for easy placement.

To find the kneepad that best suits your working situation, read more about our kneepads on the product pages.

User Guide

Do you kneel down occasionally or do you spend a lot of time working on your knees? Perhaps you kneel and stand up many times a day? Choose the kneepad that best suits your working situation by checking our new user guide on all kneepad packaging.

Save your knees. World-leading certified knee protection.

As a leader in knee protection, we collaborate closely with the best partners in the kneepad industry, such as the British brand D3O®. The innovative D3O® technology provides exceptional impact protection and shock absorption. Louise Wilson from D3O® explains how this works.

“D3O® is a unique technology that enables us to create innovative, active materials that react differently depending on the type of forces they are subjected to. The molecules in the material flow with the movements of the user, but upon shock will lock and stiffen to absorb the energy of the impact. This means that we are able to offer a unique combination of comfort and flexibility with extreme protection when it really counts.”

D3O® technology is used in a wide range of body-protection products. It can be found in everything from clothing and footwear for motorcyclists and extreme sports athletes to PPE for the armed forces and the police.

“I think we’ll soon start seeing more solutions in personal protective equipment that are similar to those used for extreme sports, for example when it comes to protecting your head, neck, elbows and hands,” says Louise Wilson from D3O®.

Trousers+

Instant access to your essentials.

The 4250 AllroundWork Tool Vest from Snickers Workwear provides quick and easy access to all your favourite tools whenever you need them. While retaining all the smart functions of its predecessor, this upgraded version benefits from several new ergonomic features including improved ventilation.

Shoulder straps and belt for ergonomic usage.

The tool vest has a height-adjusting hook and loop fasteners on the shoulder straps to adjust the carrying height of the tool vest to the optimal comfort level. But to really ensure ergonomic and comfortable usage, a lot of focus has been put on the shoulder straps and the belt.

Plenty of pockets.

The vest is made of hardwearing yet extremely comfortable Dobby Pro fabric reinforced with nylon. Featuring plenty of pockets, such as nail and tool pockets, front holster pockets with tool loops, easy access angled rear holster pockets, breast pockets with a knife fastener and a padded cell phone compartment. All so the tradesmen have easy access to their essentials.

Practical for all seasons.

The tool vest is easy to adjust using a built-in expansion section on the front. This means it can be expanded and worn over a t-shirt, sweatshirt or even the thickest of winter jackets.

Tool pouches made of genuine, sustainable leather.

Snickers Workwear's new stylish leather pouches are made from sustainable vegetable tanned leather. In addition, the smooth yet durable leather has a European origin and is a by-product of the food industry where it is a waste product, making these high-quality pouches truly eco-friendly. Made in Sweden.

Flexible system.

Our sustainable leather pouches are truly flexible and can be attached either to your waist belt or to the work trousers' integrated tool holder.

Extra pockets when you need them.

Easy to Personalise.

Thanks to the moveable tool pouches you get a flexible system that can easily be adapted to your requirements. The padded ergonomic belt can be combined with braces to provide extra comfort and reduce the weight on your hips.

Choose your size and material.

For the optimal comfort and fit the ergonomic belts are available in three different sizes — Small, Medium and Large, as well as two different materials for the pouches, leather or woven polyamide — just take your pick!

For safety and efficiency.

A great tool carrier system provides everyday comfort and reduces the risk of long-term strain and injuries. But the added benefit is that it can make you more efficient at work. The tools you need are close at hand and easy to find, and additionally the whole belt is easy to take on/off during the day.

9772 Craftsmen Toolbelt

In the craftsmen's version, the tool pouch features a range of compartments and loops for various tools, including a hammer holder, knife attachment buttons and pen compartment.

9782 Service Toolbelt

In the service version, the tool pouch features a range of compartments and loops for screwdrivers, pliers, utility knife and voltmeter, as well as a hammer holder and knife attachment button.

The ultimate toolbelt.

The XTR Toolbelt from Snickers Workwear comes with an advanced ergonomic design and adjustable padded braces, taking the weight off your hips for enhanced working comfort. The unique and flexible pouch attachment system allows you to position the hardwearing leather pouches exactly where you want them. The XTR Toolbelt is available in a choice of versions for carpenters and electricians, featuring special pouches designed to facilitate each specific job. Available in three sizes to fit most craftsmen.

9770 XTR Carpenter's Toolbelt

- Adjustable braces, padded over the shoulders for enhanced comfort.
- Reflective features for enhanced visibility.
- Ergonomic design and multi-layer padding for enhanced working comfort.
- Robust and innovative aluminium buckle designed for easy opening and closing.
- Hard-wearing leather pouches with double seams and rivets for enhanced durability.
- Screw & nail pouches with unique angled openings for easy access at all times.

In the carpenter's version, the tool pouch features a range of compartments and loops for various tools, including a hammer holder, knife attachment buttons and pen compartment.

In the electrician's version, the tool pouch features a range of compartments and loops for screwdrivers, pliers, utility knife and voltmeter, as well as a hammer holder and knife attachment button.

Perform and protect.

Your hands are your most important tools, but they are also the body part most exposed to injuries. With our wide range of advanced work gloves — designed for various specific needs — you can count on the ultimate combination of functionality, durability, protection and comfort. All our gloves are certified according to EN 388:2016 and have been developed in close collaboration with professional users.

A family for every need.

Precision. Thin, light and supple gloves with emphasis on dexterity and fit. Perfect for high-precision work. The flexible materials on the dorsal side of the hand, cushioning and reinforcement prints provide optimal protection and dexterity.

Power. The workhorse gloves for heavy-duty work like carrying, loading and tearing in tough environments. Sophisticated patterns and durable materials ensure superior performance, protection and comfort. Several styles feature knuckle protection.

Weather. Waterproof, padded and insulating gloves built for work in rough and cold weather. Advanced premium materials, such as Thinsulate® and Hipora®, provide excellent dexterity, friction and grip even in wet, cold and slippery conditions.

Top-quality service.

We know you run a fast-paced operation. Performing your best and always making a good impression is everyday business, that is what our Service Line is all about. A range of garments designed specifically to help you and your company deliver a top-quality service that your customers will remember. Whether you are in transport, distribution, maintenance, assembly, light industry or perhaps facility management, our new Service Line is ready to deliver. Combining contemporary design for amazing fit and comfort with just the right functionality, and of course, every garment is ready for your company logo.

1673 Service Jacket
2708 Classic Polo Shirt
6800 Service Trousers

Make an impression.

Modern workwear with a strong profile is a true image booster, and, with company profiling, you will reinforce the impression. It's a stamp of quality and helps your company stand out, making it more distinct and recognised for the right reasons.

Comfort on the move.

Every garment in the new Service Line features a modern cut for a perfect fit. Trousers with pre-bent legs, jackets with pre-bent sleeves and soft and stretchy easy-care fabric ensure maximum freedom of movement and superior working comfort.

Easy care fabric.

Our Service Line is made of durable and dirt-repellent yet soft and stretchy easy-care fabric for superior long-lasting comfort. It withstands industrial washing and retains stretch, shape and colour over the long term.

Sharpen your profile.

Doing a professional job is the best way to spread the word about your company. Combined with professional profiling you will double the impact. At Snickers Workwear we are happy to assist you with everything from heatsealing and customised embroidery to personalised packaging. All it takes to help you show your skills.

6700 Women's Service Trousers
2516 Women's T-shirt

T-shirt profiling.

Heat-sealing is the best choice when profiling your company T-shirts. Count on high quality in any size and colour.

Quality embroidery.

With embroidery you get quality with every stitch, but remember that words or symbols smaller than 5 mm can be difficult to read.

Foul weather garments.

When profiling your waterproof garments, heat sealing is the way to go. If you prefer embroidery, we will tape the rear of the embroidery to make sure the garment retains its waterproof characteristics.

Fleece profiling.

For a company-profiled fleece, embroidery is the obvious choice since heat-sealing might leave marks in the fabric.

Reflective stripes.

We can sew additional reflective stripes onto your work trousers and jackets. A cost-efficient solution to boost your personal protection.

High-Vis profiling.

Profiling High-Vis garments is rather special. Excessively large logos may jeopardise the classification of the garment. For optimum and safe company profiling, please contact us for more information.

Personalised packaging.

When you order a range of garments for all employees we have the perfect service for you: personalised packaging. That means everyone gets all his or hers garments in a package labelled with their name. This facilitates easier internal distribution at your company and guarantees that everybody gets the right garments and the right sizes. Easy, convenient and personal.

At Snickers Workwear we only use high-quality threads to make sure your company logo stands out in the long run.

With our advanced heat-sealing technique you get distinctive high-quality prints in the sizes and colours of your choice.

Our embroidery embodies quality with every stitch. Giving your workwear an image boost that stands out in all the right ways — for a long time to come.

For the ultimate in company profiling, don't hesitate to talk to our experts. They know what works best and can suggest a cost-efficient solution designed for you and your company.

Create a uniform identity.

Matching design,
colours and features.

You and your co-workers are the optimal builders of your brand. Together, you can easily create a strong visual identity while you are doing what you do best: your work. Snickers Workwear provides ample opportunity for you and your team to build a distinct and uniform identity through workwear — either through the design, colours or features, or by employing all three at the same time.

1. Design — choose a common silhouette.

Workwear with a common pattern design gives your team a clear-cut silhouette. Our 1100 jacket, for example, is the basis for a variety of jackets with different functions and provides a perfect platform for building a strong identity. These jackets in combination with any of our AllroundWork trousers create a complete, uniform look. Contact us for more information on how we can build a common silhouette for your team.

2. Features — stay in the family.

Another way to create a compelling visual identity through workwear is to choose items that offer the same kind of features. Our four families: LiteWork, FlexiWork, RuffWork and AllroundWork are built according to this concept and offer you a quick and easy way to build a recognisable look and feel.

3. Colours — wear your brand palette.

Our workwear comes in a multitude of colours, allowing you to mix and match freely in order to harmonise with the colour palette of your brand identity. This is perhaps the most obvious way to create a consistently strong, uniform outfit.

Personal protective equipment.

Personal Protective Equipment (PPE) Regulation (EU) 2016/425.

The overall purpose of the Personal Protective Equipment (PPE) Regulation is to define rules for equipment designed and manufactured to be worn or held by a person for protection against one or more risks to that person's health or safety.

Further information is available from the European Commission at ec.europa.eu

Garments marked with a user instruction symbol have a guide which contains important information for the user to take into consideration when choosing PPE. How to understand the

markings in the garment, how to use the PPE and how to take care of the garment in order to retain the protection offered.

EN ISO 20471 High visibility clothing.

EN ISO 20471 specifies requirements for clothing capable of signaling the user's presence visually. Performance requirements are included for color and retro reflection as well as for minimum areas and for the disposition of fluorescent and reflective materials.

The norm includes three different classes where class 3 has the highest visibility. For each class, the norm dictates the area and placement of the fluorescent, reflective and contrast

materials, respectively. None of the fluorescent and reflective materials can replace the other in calculating areas as the purpose differs.

Garments can be combined to achieve a higher level of visibility and class. However, it's not always that 1+2 equals 3. It all depends on the size of the area of the material in question (fluorescent and reflective), as well as design requirements.

EN ISO 11612

Protective clothing against heat and flame.

EN ISO 11612 specifies performance for clothing designed to protect from heat and/or flame (not including protection for firefighters and welders). The norm indicates protection against ignition from various heat sources: (A) limited flame spread, A1 surface ignition and A2 edge ignition, according to test method ISO15025; (B) convective heat and open flames, according to test method ISO9151; (C) radiant heat, according to test method ISO6942; (D) molten aluminum splash, according to test method ISO9185; (E) molten iron splash, according to test method ISO9185; and (F) contact heat (flat iron, hot plate etc.), according to test method ISO12127-1.

Garments certified according to EN ISO 11612 should be used together with other protective clothing that meets

the requirements of EN ISO 11612. Furthermore, the norm requires full protection of arms and legs, which means t-shirts and shorts do not meet the EN ISO 11612 requirements. However, the user can wear clothes certified according to EN 14116 (which does not have the same design requirements) underneath for enhanced protection.

To ensure full protection, the head, neck, hands and feet must be covered with other approved protective clothing. Note that garments classified as underwear should always be worn together with outer garments that meet the protection requirements of EN ISO 11612. The underwear will not provide the right level of protection on their own.

EN ISO 14116

Protective clothing against flame.

EN ISO 14116 specifies the performance of protective clothing for workers exposed to occasional brief contact with open flames with no other thermal risks. This norm is a “lighter” version of EN ISO 11612 and is relevant for garments without full-length sleeves and legs as well as accessories such as hats, beanies, balaclavas, socks, underpants etc.

EN ISO 14116 is available in three different indexes – 1, 2 and 3, where Index 3 stipulates the highest protection requirements. Materials classified as Index 1 must not be worn next to skin and garments that contain Index 1 materials should only be worn on top of Index 2 or 3 garments.

IEC 61482-2 / EN 61482-2

Clothing for protection from the thermal hazards of an electric arc.

Despite all the measures in place a large number of electric arc accidents occur every year. IEC 61482-2 specifies requirements for clothing protecting against the thermal hazards of an electric arc. These clothes belong to the Risk III category, which defines garments used in high-risk environments, and which are certified to eliminate second-degree burns in the event of an electric arc flash (flashover).

In order to measure the product's level of protection, the garment is subjected to two different test methods: an open arc test and a box test. The test methods use different test set-ups, arc configurations, test parameters, test procedures and result parameters. The results from the different methods of testing can be neither physically compared nor mathematically converted to those from the other form of testing. The arc rating has to be tested and assessed by either one or the other method. In a box test, the object is subjected to a directed arc flash of either 4kA (APC -Arc protection class - 1) or 7kA (APC 2).

ATPV or E_{BT50}

With the open arc method, the test result is given in calories – cal/cm². The calorie value gives you an indication of how much heat/energy exposure you could withstand before you risk a 50% chance of getting a second degree burn. As well as a result in calories, an ATPV (Arc Thermal Performance Value) or E_{BT50} (Energy Break-open Threshold), when holes begin

to form in the fabric) value is also specified. Neither value is better than the other. Basically, garments/fabrics that get an E_{BT50} value are typically more insulating than they are strong and ATPV garments/fabrics are usually stronger than they are insulating.

ELIM – eliminate the risk of a second-degree burn

Whereas the ATPV or EBT50 value gives an indication of what energy level you run a 50% risk of getting a second-degree burn at, the incident energy limit (ELIM) defines the energy level at which you avoid the risk of a second-degree burn. Remember, however, that there is still a risk of getting a first-degree burn injury. The ELIM value is calculated from the average of the three highest incident energy data points without breakopen, shrink-open and which do not exceed the Stoll curve. The three incident energy data points are taken just below the mix zone in the test report. The Stoll curve determines the rating of the transfer of heat energy (calories) based on the time of transfer and the level of heat energy produced.

NOTE! All garments worn must protect against electric arc! Including underwear, socks, gloves, underpants and t-shirts or shirts worn underneath the outer layer. And remember that the more layers of electric-arc-protective clothing you wear, the higher your protection.

EN 13034

Protective clothing against liquid chemicals.

Specifying the requirements for clothing offering limited protection against liquid chemicals, EN 13034 targets professions and situations in which the wearer relatively easily can step out from the risk environment and quickly remove the garment. Typical professions include truck drivers who drive gasoline transports and service technicians who occasionally handles lubricants, acids etc. For tougher environments with higher risks, higher protection garments are required.

The classification Type 6 refers to full chemical overalls whereas Type PB refers to partial body protection, for example jackets and trousers.

The norm's design requirements state that the garment should include no features that may collect liquid chemicals and hold them onto the fabric surface (such as unprotected pockets etc).

NOTE! Since liquid chemicals often are flammable, the user should wear antistatic clothing for optimal protection as well as flame retardent clothing. EN 13034, EN ISO 11612 and EN 1149 make a great combination for this purpose.

EN ISO 11611

Protective clothing for use in welding and allied processes.

EN ISO 11611 specifies material performance and design requirements for clothing developed to protect against heat and flame and welding. Essentially the welding version of EN ISO 11612, this norm defines protection against ignition from various heat sources, such as open flames, molten iron splash and contact heat. In addition, garments certified according to EN ISO 11611 protect against radiant heat from the arc as well as minimize the possibility of electrical shock by short-term, accidental contact with live electrical conductors.

EN ISO 11611 features two classes, Class 1 and Class 2, depending on the type of welding technique used. Class 1

comprises less hazardous welding techniques and situations, lower levels of spatter (splashes of molten metal) and radiant heat, whereas Class 2 includes more hazardous welding techniques and situations, higher levels of spatter and radiant heat.

The norm also includes several design requirements, such as that suits should completely cover the upper and lower torso, neck, arms and legs, and that external pockets should be covered by flaps at least 20 mm wider than the opening of the pocket.

EN 342

Protective clothing against cold.

EN 342 specifies the requirements and performance of clothing designed to protect against cooling of the body in cold environments. It is possible to certify single garments as well as an entire outfit in several layers.

Wearing several layers is a great way of increasing insulation and enhance the protection against cold. The layered outfit also makes it easy to adjust to rapid temperature changes.

Remember that sweating should be avoided during continuous cold exposure, since moisture absorption will progressively reduce insulation. In addition, wind increases the need for protection. In the User's Guide that comes with each garment you can see correlation between temperature, wind speed and level of activity for the wearer to see under what conditions you can work.

EN 14404 Knee protection.

This standard encompasses the size, force distribution, penetration resistance and usage of kneepads.

Type 2 – integrated knee protection

Work in a kneeling position involves the risk of chronic conditions such as prepatellar bursitis and cartilage injuries caused by continuous pressure on the knees. Knee protection is therefore recommended for all work in a kneeling position. The protection should distribute forces evenly and prevent hard objects on the ground from causing injuries. It is important that knee protectors do not compromise venous drainage in the leg while kneeling or standing up. It must therefore be easy for workers to change position and to stand up to re-establish a normal blood circulation at frequent intervals while wearing knee protectors. We use Type 2 knee

protectors in our products. For this type, the knee protection is integrated with the trousers, which means that wherever you go your knees are always protected. For Type 2 setups, the knee protectors and the trousers are co-certified, ensuring safe and secure protection.

Various levels of protection

Knee protection is also classified in three performance levels. Level 0 includes knee protectors suitable only for use on flat surfaces and providing no protection against penetration. Level 1 and 2 items, however, are suitable for use on both flat and non-flat surfaces in harsher conditions and provide protection against penetration at forces of various degrees.

EN 1149-5 Protective clothing electrostatic properties.

EN 1149-5 specifies material performance and design requirements for protective clothing with electrostatic properties. These protective clothes are designed to avoid the risk of incendiary discharge (the formation of sparks), when for example an elbow or a knee is brushed against a wall or similar surface/object. This is vital when working with flammable materials such as gas or gasoline.

The material performance is based on the material's surface resistivity, electrical resistance and/or charge decay. In

order to be fully protected, all non-complying materials and conductive parts (zippers etc) should be fully covered. In addition, the person must be properly earthed by wearing shoes that allow static electricity to dissipate into the ground.

NOTE! EN1149-5 certification is not sufficient for work with fine electronics and similar sensitive electronics (microchips, printed circuit boards, cell phone assembly, etc). For this kind of work, you need protective clothing certified according to EN 61340.

EN 343 Protective clothing against rain.

Rain doesn't only make you wet, but also cold, hampering your work performance.

EN 343 specifies the performance and requirements of clothing protecting against rain and vapor. The norm defines the water penetration resistance of the garment's fabric and seams and water vapor resistance. Both feature four classifications – 1, 2, 3 and 4 – where classification 4 indicates the best performance. Ready-made garment rain tower test (R) is optional and will be replaced with X if garment has not been tested.

Remember that although a certified product protects against rain, the wearer can still be wet and cold from the inside through heavy sweating and lack of efficient ventilation (breathability) in the garment. To minimize the accumulation of moisture vapor (sweat) from the body, the user should choose garments based on the work intensity. The higher intensity, the higher breathability is needed, and vice versa.

EN 388

Protective gloves against mechanical risks.

This standard applies to all kinds of protective gloves in respect of physical and mechanical aggressions caused by abrasion, blade cut, tear, puncture and, if applicable, impact.

A performance level is determined according to each test result – the higher the number or ascending letter, the greater the level of protection. Results are displayed using a pictogram, permitting clear understanding of the capability of the glove.

a. Resistance to abrasion: based on the number of cycles required to abrade through the sample glove. The resistance to abrasion is measured by the number of cycles required for hole to occur. Highest protection is 4 and is equal with 8000 cycles.

b. Circular blade cut resistance: based on the number of cycles required to cut through the sample by a circular rotating blade at a constant speed. The result is compared with a reference material and an index is obtained. Highest protection is 5 and is equal with an index of 20.

c. Tear resistance: based on the amount of force required to tear the sample. The resistance to tear is defined as the force necessary to propagate a tear in a rectangular specimen slit half way along its length. The specimen shall be torn totally apart. Highest protection is 4 and is equal with 75 Newton.

d. Puncture resistance: based on the amount of force required to pierce the sample with a standard sized point and speed (10 cm/min). Highest protection is 4 and is equal with 150 Newton.

In all cases, 0 indicates the lowest level of performance, as follows. These are the requirements for each performance levels. The performance level is displayed alongside the pictogram.

e. Straight blade cut resistance: based on a straight blade drawn across the sample until cut-through takes place and measures the contact load applied to the blade to make a cut-through over a 20 mm stroke length. The performance levels range from 'level A' cut resistance with a contact force between 2N and 5N, up to 'level F', with a contact force greater than 30N.

f. Impact resistance: This is an optional test and is used for gloves which incorporate specific impact-resistant properties which may be added to the palm, back of the hand or the knuckles. Testing is carried out in accordance with clause 6.9 of EN 13594:2015 – 'Protective gloves for motorcycle riders'. A marking code 'P' is added for gloves meeting the impact-resistant requirements.

Performance level	0	1	2	3	4	5
a. Abrasion resistance (cycles)	<100	100	500	2000	8000	–
b. Blade cut resistance (factor)	<1.2	1.2	2.5	5.0	10.0	20.0
c. Tear resistance (newton)	<10	10	25	50	75	–
d. Puncture resistance (newton)	<20	20	60	100	150	–
Level	A	B	C	D	E	F
e. Straight blade cut resistance (N)	2	5	10	15	22	30
f. Impact resistance	Approved (P)			Not approved (blank)		

EN 407

Protective gloves against thermal risks.

This standard specifies thermal performance for protective gloves against heat and/or fire. Snickers Workwear has gloves with resistance to flammability.

a. Resistance to flammability

(performance level 0 – 4)

b. Contact heat resistance

(performance level 0 – 4)

c. Convective heat resistance

(performance level 0 – 4)

d. Radiant heat resistance

(performance level 0 – 4)

e. Resistance to small splashes of molten metal

(performance level 0 – 4)

f. Resistance to large splashes of molten metal

(performance level 0 – 4)

Gloves must achieve at least Performance level 1 for abrasion and tear strength.

X=performance level not tested.

Resistance to flammability: based on the length of time the material continues to burn and glow after the source of ignition is removed. The seams of the glove shall not come apart after an ignition time of 15 seconds.

Contact heat resistance: based on the temperature range (100–500 °C) at which the user will feel no pain for at least 15 seconds. If an EN level 3 or higher is obtained, the product shall record at least EN level 3 in the flammability test. Otherwise, the maximum Contact heat level shall be reported as level 2.

Convective heat resistance: based on the length of time the glove is able to delay the transfer of heat from a flame. A level of performance shall only be mentioned if a performance level 3 or 4 is obtained in the flammability test.

Radiant heat resistance: based on the length of time the glove is able to delay the transfer of heat when exposed to a radiant heat source. A performance level shall only be mentioned if a performance level 3 or 4 is obtained in the flammability test.

Resistance to small splashes of molten metal: the number of molten metal drops required to heat the glove sample to a given level. A performance level shall only be mentioned if a performance level 3 or 4 is obtained in the flammability test.

Resistance to large splashes of molten metal: the weight of molten metal required to cause smoothing or pinholing across a simulated skin placed directly behind the glove sample. The test is failed if metal droplets remain stuck to the glove material or if the specimen ignites.

EN 511

Protective gloves against cold.

This standard applies to any gloves to protect the hands against convective and contact cold down to –50 °C. Protection against cold is expressed by a pictogram followed by a series of 3 performance levels, relating to specific protective qualities. Highest protection is 4.

a. Resistance to convective cold: Performance level 0–4.

Based on the thermal insulation properties of the glove which are obtained by measuring the transfer of cold via convection.

b. Resistance to contact cold: Performance level 0–4. Based on the thermal resistance of the glove material when exposed to contact with a cold object.

c. Permeability by water:

0 or 1. 0 = water penetration after 30 minutes of exposure.

1 = no water penetration.

X=performance level not tested.

All gloves must also achieve at least performance level 1 for abrasion and tear according to EN 388.

The best materials from the strongest brands.

The right clothing is crucial for a safe and efficient workday. And in order for a garment to function optimally for a specific area of use, it must be made of materials with the right properties. Often several different materials are combined to create the best possible garment. In our quest to design innovative, high-quality workwear, we collaborate with many industry-leading manufacturers of technical fabrics and materials.

37.5° Technology

37.5° Technology regulates your body's microclimate, to help create an optimal working environment within your clothing. By actively responding to your body's natural humidity and infrared energy (IR), patented active particles embedded in the material removes moisture in the vapor stage to help keep you dry. If you get cold, these same active particles capture and return that IR energy to help warm you up.

37.5° fibers are also available with enhanced biodegradation. With very few end-of-life options for textiles available, enhanced biodegradation offers a step in the right direction in the work of improving waste management. 37.5° fibers with enhanced biodegradation accelerate the natural degradation process when placed in landfill conditions. These fibers are also recyclable and are converted to naturally occurring materials so they do not contribute to problem with microplastics. 37.5° is a trademark of Cocona Labs.

Read more about the technology and test results on snickersworkwear.com.

AIS

A lightweight and soft micro fleece fabric. It's an ideal mid-layer for any outdoor activity with its insulating and high moisture transportation ability.

Armortex®

Armortex is a DuPont™ Kevlar® fiber used to help provide strength, flexibility, and lightweight protection in everything from yarns and woven ballistic fabrics to ropes and apparel. It's lightweight, durable and extraordinarily strong and used to make a variety of clothing, accessories, and equipment safe and cut resistant.

Belltron™

Belltron™

Belltron™ offers excellent static control performance by blending small amounts of Belltron™ into the primary fiber of choice. Belltron™ controls static electricity regardless of environment. It has consistent antistatic properties even in absolutely dry conditions.

Belltron™ is not a laminated fiber, but rather a polyester or nylon fiber containing continuously-embedded anti-static particles. No carbon particles can be removed from Belltron™ by rubbing. The static control property is applied inside the fiber, there for Belltron™ maintains an extremely stable performance even after washing.

Belltron™ is a trademark of KB SEIREN, LTD.

BCI

The Better Cotton Initiative (BCI) — a global not-for-profit organisation — is the largest cotton sustainability programme in the world. BCI exists to make global cotton production better for the people who produce it, better for the environment it grows in and better for the sector's future. BCI aims to transform cotton production worldwide by developing Better Cotton as a sustainable mainstream commodity. Farmers who grow Better Cotton commit to grow cotton in line with Better Cotton principle, which covers the following areas: minimising the harmful impact of crop protection, water stewardship, caring for soil health, fibre quality, biodiversity and responsible land use and decent work.

CORDURA®

An extremely tough and hardwearing material, used to reinforce exposed parts such as pockets, knees and sleeves. It is also water and dirt repellent, easy to care for and retains its shape.

It is a high technology fabric made with air-textured polyamide fibres able to meet the toughest standards of strength and durability.

CORDURA® is a trademark of INVISTA Inc.

D3O®

D3O® smart materials specialise in impact protection and shock absorption. Its unique patented polymer composites contains a chemically engineered dilatant as an energy absorber. The material's molecules flow freely in standard conditions, but on impact, they lock together to absorb and disperse energy, before instantly returning to their flexible state. This unique characteristic provides enhanced impact protection, while providing versatile and flexible materials that can be manufactured for a host of impact protective applications. Note: D3O® does not "go hard".

Snickers Workwear uses different D3O® material grades specially tuned for a wide range of temperatures that offer enhanced cushioning, long-term comfort and superior impact protection on key contact areas.

GORE® WINDSTOPPER® Garments

GORE® WINDSTOPPER® Products keep you comfortable and protected across a wide range of weather conditions and activities to maximise your performance. They are made with laminates that use a mix of surface and lining materials for 2- or 3-layer constructions. GORE® WINDSTOPPER® product technology is used to provide thermal insulation in colder temperatures where wind can add chill. One major advantage: garments are less bulky and can be worn indoors and outdoors. GORE® WINDSTOPPER® Fabrics offer maximum breathability, which help maintain the body's core temperature. In wet conditions, GORE® WINDSTOPPER® Soft Shells offer rain resistance.

GORE-TEX Garments

GORE-TEX Technical Garments are extremely durable, waterproof and are guaranteed to keep you dry and comfortable — all day long. The GORE-TEX membrane has over 1.4 billion pores per square cm and the pores are 20.000 times smaller than a drop of water, but 700 times bigger than a molecule of moisture vapour. This prevents water from penetrating, while it aids your body's natural cooling process by allowing perspiration vapour to escape. Special GORE-SEAM® tape ensures that all seams are durably waterproof.

GRS

The Global Recycled Standard (GRS) is an international, voluntary, full product standard that sets requirements for third-party certification of recycled content, chain of custody, social and environmental practices, and chemical restrictions. The standard helps consumers gain more confidence in recycled content product claims. Learn more at GlobalRecycled.org

Hipora®

Hipora® is a waterproof and breathable membrane used for gloves. It keeps your hands dry and comfortable.

Hipora® is a trademark of Kolon Industries.

LYCRA® T400®

LYCRA® T400® fibre provides excellent performance and aesthetics in applications that require low to moderate stretch. It's a multi-component yarn in which different polymers are joined together within each filament. When exposed to heat, each polymer shrinks to a different degree, producing a smooth helical crimp. Because the crimp is not mechanically induced, the stretch and recovery of LYCRA® T400® fibre is greater and more durable than those of textured yarns. 18% of the polymer is made using renewable plant-based material for a more sustainable lifestyle.

STANDARD
100

SE 12-207
RISE

OEKO-TEX®

The OEKO-TEX® label indicates the additional benefits of tested safety for skin-friendly clothing and other textiles.

The International OEKO-TEX® Association is an independent test institute, testing textiles for harmful substances according to OEKO-TEX® Standard 100 for textile products of all types which pose no risk whatsoever to health.

Polartec® Fleece Series

In 1981, Polartec® became the first to knit, nap, and shear synthetic yarns into thermal fabric for outdoor apparel. The Polartec® synthetic fleece fibres were engineered for more versatile durability. With greater resiliency, lightweight warmth and fast drying times, Polartec® fleece remains the industry standard for outerwear performance. Polartec® fleece comes in Micro, 100, 200 and 300 weights.

Polartec® Power Stretch®

Polartec® Power Stretch® is a performance-fit fabric platform that raises the bar for stretch fabric capabilities. Advanced dual-surface knit construction gives Power Stretch® enough tensile strength for durable shape recovery. Performance wicking abilities mean it keeps up with any activity.

REPREVE®

As part of our continuous sustainability work, we have upgraded some of our styles with REPREVE®, the world's number-one brand of recycled performance fibre. In order to make sustainable claims reliable, the REPREVE® fabric is verifiable through the U-Trust® Verification program. This means the fibre contains the unique FiberPrint® tracer technology and the fabric is analysed to validate REPREVE® content claims and composition.

Schoeller®

Schoeller® is an elastic wind- and water-repellent softshell fabric that makes for the perfect companion for all your outdoor activities. Different bonded layers of elastic fabric ensure maximum function and are extremely comfortable to wear. No matter what you love to do, Schoeller® is with you all the way, guaranteeing effective weather protection and maximum freedom of movement.

Sorona®

The Sorona® fibre offers environmental benefits and great performance. Sorona® has a unique PTT molecular structure designed for maximising performance and provides stretch without spandex. 37% of the polymer is made using renewable plant-based material for a more sustainable lifestyle. The fibre is an eco-efficient performance fibre that also offers exceptional softness and a rich feel for day-in, day-out comfort. Garments featuring the Sorona® fibre retain their shape and resist bagging for maximum comfort on the move.

Thinsulate™

Thinsulate™

Thinsulate™ insulation has very high insulation properties compared to its weight. The fine fibres that make up Thinsulate™ insulation, work by trapping air molecules between you and the outside. The more air a material traps in a given space, the better it insulates you from the cold outside air.

Thinsulate™ is breathable, moisture-resistant and machine washable. Thinsulate™ is a trademark of 3M™.

Washing advice.

Keep clean to satisfy the standard. And to increase the product's service life.

Your workwear and PPE garments must always be clean to be safe and satisfy the standard. Garments covered in dirt will significantly decrease visibility and other properties and may thereby put you in danger. Frequent washing will also help materials last much longer since dust and dirt may destroy fibres by abrasion. A longer service life for the product is good for both your finances and the environment. The flame and heat protection in protective clothing made of fabrics with inherent flame-resistant properties cannot be washed or worn out. In fact, regular washing ensures that the garments do not contain any dirt or flammable particles that will compromise the protective properties.

Washing machine.

- Read and follow the washing instructions on the garment's care label.
- Make sure to close all zippers, (press) buttons, hook and loop fasteners, etc. and turn the garment inside out before putting it in the washing machine to prevent damage to the fabric.
- When washing garments with reflective details (reflective stripes etc.), you should always wash the garments inside out. The reflectivity of any reflective material will be reduced every time garments are washed without being turned inside out. Note that damage to the flame-retardant, visibility or reflective properties of the material may not be visible to the naked eye.
- Fill the washing machine to reduce the number of washing cycles.

Detergents.

- Use organic detergent that is friendly to the environment and your skin to prevent skin irritation.
- Use special wool detergent for woollen garments.
- Do not use more detergent than necessary in order to protect the environment and the fabrics and to avoid lumps of detergent on your clothes.
- Do not use softener, as it may reduce the performance of the fabric as well as contain many hazardous chemicals that are not always listed on the label.
- Softener and soap-based detergents should always be avoided when washing PPE garments as they leave traces of either fat/grease from soap or chemicals that could counteract the properties of the fabrics.

Temperature.

If the clothes are only slightly dirty, use lower temperatures in order to save energy and protect the fabrics. Washing at 40 degrees instead of 60 degrees saves almost 50 per cent energy.

Drying.

- Insofar as is possible, dry outside in the air or on a drying rack. However, certain garments must be tumble dried at a high temperature to retain their properties — read the label carefully.
- When using a dryer, do not use a higher temperature than necessary in order to save energy, avoid shrinkage and protect the fabrics.
- Do not let the garments stay in the washing machine after washing, hang them on a drying rack immediately in order to prevent creases.

Materials.

- To protect fabrics, reflective tapes and prints, turn the garments inside out before washing them.
- Wool is a natural product that can keep itself clean; it does not need to be washed as often as cotton or man-made materials.
- The garment's care instructions should be followed particularly carefully when washing rainwear. Some rainwear has sealed tapes that can be damaged during wash and dry cycles, and other rainwear garments must be tumble dried or ironed to renew the water resistance.

Never mix certified and non-certified garments.

You should never mix certified garments with non-certified garments in the same wash, since non-certified garments may bleed colours and/or chemicals that will damage the certified garments.

Damaged garments.

If the garment has been exposed to chemicals or heat/flame, it must be carefully examined to make sure that the fabric is undamaged. If a certified garment needs to be repaired, you must only use approved/certified materials and fabrics.

Handwash

No Bleach

Do not iron

Do not dry clean

Maximum washing temp. 40°C

Do not tumble dry

Iron at maximum 110°C

Dry cleaning

Maximum washing temp. 60°C

Drying flat drip

Iron at maximum 200°C

Measure right — for a good fit.

Carefully follow our measuring tips below to make sure you get the right size. Snickers Workwear keeps all standard sizes in stock for speedy deliveries (see specific garment for the standard size range). We also offer special sizes — delivery may take a little longer, but it's well worth it. Outside sizes are available to order with 50% extra surcharge.

A. Body length.

Top of the head to the sole of the foot.

B. Chest.

Chest width, horizontally at the widest place.

C. Waist.

For One-Piece Trousers, Overalls and Jackets.
Waist width horizontally at navel height.

D. Lower waist.

For Trousers.
Lower waist width at the place you wear your trousers.

E. Seat.

Seat width, horizontally at the widest place.

F. Inside leg.

Crotch to the sole of the foot. Extremely important measurement to ensure the kneepads end up in the right position.

Important measurement tips.

1. Get help from someone to take your measurements.
2. Take measurements dressed in body-tight underwear.
3. Measure tight against/around your body, but without the measuring tape being pulled so hard that it “cuts” in.
4. When measuring the inside leg, make sure the measuring tape is firmly extended.

Every CE-marked garment has to have a label with a pictogram that shows the size and the body measurements of the person that the garment is intended for. This means that you always can check inside the garment to see the size.

Getting the right size.

1. Choose the right size chart below:

3XXX for 3-series trousers

6XXX for 6-series trousers

2. Look for your body measurements in the chart and choose the corresponding size.

3. To ensure an optimal fit – try them on for real!

All measurements are body measurements.

* **Closest corresponding jeans size.** Sizes within the blue frame are Standard Stock Items which are available for most of our Trousers - see specific garment for current size range. SHORTS are available in Regular length. PIRATES are available in Short and Regular lengths.

MEN'S ONE-PIECE TROUSERS

IMPORTANT: It is important that you take into consideration your full waist measurement (C) when choosing the size of one-piece trousers. You may need a bigger size in one-piece trousers compared to on-the-waist trousers to make sure there is enough space for your stomach.

E	Your Inside Leg	41	44,5	48	51,5	55	58,5	62	65,5	69	72	75	78

Please note! JACKETS and TOPWEAR are in double sizes, i.e. 98/104, 110/116 etc.

Headwear

YOUR SIZE		S	M	L
Your Head circumference in cm measured at widest point	CM	56–58	58–60	60–62

Gloves

Always choose gloves with the right finger length. Try them on to find the right one.

YOUR SIZE		7	8	9	10	11	
1	Hand circumference	MM	178	203	229	254	279
2	Hand length	MM	171	182	192	204	215
	Minimum length of glove*	MM	230	240	250	260	270

* If the glove is made for a specific application, it is possible to depart from the requirements of minimum glove length if it is stated in the user guide.

Ensure you get optimally fitting garments
— **Try them on for real!**

A. Body length.

Top of the head to the sole of the foot.

B. Chest.

Chest width, horizontally at the widest place.

C. Waist.

For One-Piece Trousers, Overalls and Jackets.
Waist width horizontally at navel height.

D. Lower waist.

For Trousers.
Lower waist width at the place you wear your trousers.

E. Seat.

Seat width, horizontally at the widest place.

F. Inside leg.

Crotch to the sole of the foot. Extremely important measurement to ensure the kneepads end up in the right position.

Please note! TOPWEAR and FLEECE are available in Regular length.

Three fits and plenty of sizes for optimal protection.

The right fit and size is a matter of safety, comfort and protection. If the work trousers don't have the right fit for your body type, or are too big or small, your kneepads will not stay in the right position to protect your knees. Since our bodies are all different, Snickers Workwear offers three different fits — Slim fit, Regular fit and Loose fit — as well as one of the widest size ranges in the industry. With 70 different trouser sizes available, you can be sure to find a pair that fits your body perfectly, ensuring optimal protection.

Fits.

Slim fit.

Slim fit garments are figure-hugging and quite tight, giving you a slimmer look. However, they are also soft, stretchy and follow your every move.

Regular fit.

The garments follow your body shape, but are not tight. There is room for air between the garment and your body.

Loose fit.

The loose fit garments sit securely at the waist while the legs are wider and airier. All trousers in the 3-series have loose fit.

70 sizes.

One of the widest selections in the industry.

Snickers Workwear offers one of the widest selections of sizes available in the industry. 70 sizes of trousers with five different leg lengths! So whether your legs are short or long, we've got just the trousers for you. Special sizes are also available. Delivery may take slightly longer, but it's definitely worth the wait.

Tools that fit the female form.

Our workwear is purposefully built to meet the specific needs of your job. And that's just as true for our women's workwear as for everything else we make. Functionality and durability where you need it, and comfort and fit where you demand it. And that of course also means that our women's workwear is specifically designed for the female anatomy. Trousers that are wider at the hips, and tops that are narrower at the waist, all for an optimal fit and efficient ergonomics.

Our women's workwear is developed in close collaboration with craftswomen around the world.

6771 AllroundWork, Women's Full-Stretch Trousers
Detachable Holster Pockets

Designed for all kinds of work, and made of durable 4-way stretch fabric, these trousers offer the comfort and flexibility needed for demanding, everyday tasks.

8070 AllroundWork, Women's Polartec® Terry Hoodie

Lightweight and highly comfortable women's fleece hoodie that can be used all year round as an outer layer, or as a mid-layer on cooler days.

8107 AllroundWork, Women's 37.5° Insulator Jacket

Insulated women's work jacket that keeps you warm in cold conditions. Repreve® insulation and 37.5° technology combine to provide efficient body-temperature management during intense work.

Playing is hard work.

It takes a long time to master a craft. So, what better way than to start early? Snickers Workwear Junior garments are tough and durable so that they can withstand the wear and tear of games while at the same time providing great functionality for anyone taking their first steps as an apprentice.

Flexible sizing — for a longer lifespan.

Long sleeve cuffs that can be folded up or down as well as legs that can be adjusted in length are two smart features that allow some of the Junior styles to grow with the user — extending the garment's lifespan.

The size span reaches all the way up to 164 (age 14), making it possible for older young people to also enjoy the benefits of our products.

A unique product family

HULTAFORS **GROUP** offers a dynamic range of premium brands to rely on – for distributors and craftsmen alike. Each brand within the Group is united with a common passion: to keep craftsmen at the forefront in terms of functionality, safety, protection and overall productivity.

Hultafors Groups is proud to present seventeen leading brands that together offer a unique product family for professional craftsmen.

Each brand represents expertise in its particular area and brings unparalleled knowledge and insight into the unique on-the-job challenges encountered by craftsmen. This makes it possible for us to meet, even anticipate, evolving demands by designing innovative state-of-the-art products that make the craftsmen's workday safer, easier and more productive.

Excelling in brand-driven product categories within the industry and construction equipment sectors, we offer customers and users a best-in-class experience. And by using our high-value products as well as benefitting from brands built around their needs, craftsmen can be at the forefront every day and take great pride in their work.
